

Furkan YILMAZ

Software Engineering Intern — Computer Science and Engineering Graduate

+90 538 590 4677 • furkanyilmaz2641@gmail.com • İstanbul, Türkiye

[Website](#) • [LinkedIn](#) • [GitHub](#)

Education

Sabancı University

Bachelor of Science (BS), Computer Science and Engineering
GPA: 3.66/4.00, 100% Honor Scholarship

09/2021 – 06/2026

İstanbul, Türkiye

University of Maribor

Bachelor of Science (BS), Computer Science and Engineering
Grade: 9.4/10, Erasmus+ Exchange Program

02/2025 – 07/2025

Maribor, Slovenia

Muammer Dereli Fen Lisesi

Mathematics and Natural Sciences
Grade: 97.1/100, YKS-SAY 1224th rank

09/2017 – 07/2021

Kocaeli, Türkiye

Experience

Yapı Kredi Teknoloji

Software Engineering Intern

02/2026 – Present

Kocaeli, Türkiye

- Working as a part-time intern in the customer acquisition and marketing application development team.
- Using Spring Boot and React to develop web applications for customer relationship management.

ASELSAN

Summer Intern

09/2025

Ankara, Türkiye

- Implemented a live video streaming library with C++, CMake, and GStreamer framework.
- Applied various video encoding and transmission protocols, including H.264, RTP, UDP, and WebRTC.

BRİSA Bridgestone Sabancı

Summer Intern

08/2025

Kocaeli, Türkiye

- Built a responsive Django-based web application with HTML, CSS, JavaScript, and MySQL for field data management.
- Implemented role-based access control, data entry forms, table management, data export features, and automated approval workflows.

Activities

Sabancı University – Student Representative Committee

Student Representative Committee Member

04/2024 – 10/2024

- Held monthly meetings with university administration to address student concerns.
- Collected and conveyed student feedback, prepared reports, and contributed to solutions improving student life.

Sabancı University - Industrial Engineering Society

PR Committee Member

02/2024 – 03/2024

- Designed promotional materials for IMIS'24 Harmony, the flagship event of the society.
- Gained experience in event organization, teamwork, and communication.

Sabancı University - IEEE Student Branch

Active Member

10/2022 – 02/2024

- Contributed to the PR department by designing and creating social media content.
- Developed skills in teamwork and graphic design (generally used Canva).
- Also led the design team for "Work in Progress: The Summit" as a Designer Coordinator between June-October 2023, ensuring high-quality event visuals and presentations.

Projects

Domain Generalized Remote Sensing Scene Classification: Developed and evaluated deep learning models for remote sensing scene classification, focused on domain generalization across geographic regions. Worked with satellite images, data preprocessing, model training, and performance analysis to investigate how well models generalize to unseen regions.

LLM-Based Fault Localization for UI Test Traces: Built an LLM-based prototype for localizing faults in failing mobile and web UI test traces. Processed Playwright traces, screenshots, logs, and failure descriptions to rank suspicious steps with evidence-based explanations. Used Python, LangChain, OpenAI/Gemini models, and evaluated with Top-1, Top-3, and MRR metrics.

Rating Word Sense Plausibility in Ambiguous Narratives: Developed an NLP system for graded word sense plausibility prediction in ambiguous narratives. Fine-tuned DeBERTa-v3-base with PyTorch and Hugging Face Transformers, tested regression and ranking losses, and evaluated with Spearman correlation, MSE, ranking accuracy, and precision-recall analysis.

Howudoin+: Developed a cloud-deployed mobile messaging app using Expo, React Native, TypeScript, and a Spring Boot REST API. Used Amazon DynamoDB for storage and deployed the backend on AWS ECS Fargate with ECR, ALB, CloudWatch, and CloudFront. This project represents the cloud-enhanced version of the Howudoin application.

GeoQuiz: Developed a quiz website using MERN stack (MongoDB, Express, React, Node.js). Implemented randomized geography quizzes, GitHub OAuth-based authentication, persistent quiz history tracking, and a dynamic leaderboard to enhance user engagement.

Howudoin: Created a messaging application, enabling seamless communication through a Spring Boot backend and a React Native frontend. Implemented backend functionalities including authentication, friend and group management, and real-time messaging features.

SUstore: Built a full-stack e-commerce web application using Django and React. Developed essential online shopping features and created a modern, user-friendly interface to enhance the overall shopping experience.

Skills

Languages: Turkish (Native), English (Upper Intermediate)

Programming Languages: Python, C/C++, Java, HTML/CSS (Intermediate); JavaScript, SQL (Beginner)

Backend: Django, Spring Boot (Intermediate); Node/Express (Beginner)

Frontend: React (Intermediate); React Native, Vue (Beginner)

Database: MongoDB, PostgreSQL, SQLite, MySQL Workbench

DevOps/Cloud/AI: Git, AWS, Docker, LangChain

Development Tools: Jira, Postman, VSCode, IntelliJ, Codex, Android Studio

Other Tools: MS Office, Canva, CapCut, Figma, Obsidian
