Education

Sabancı University - B.Sc. in Computer Science and Engineering GPA: 3.66/4.00, 100% Honor Scholarship	<i>Sep 2021 – Jun 2026</i> <i>İstanbul, Türkiye</i>
University of Maribor - Erasmus+ Exchange Student Grade: 9.4/10, Computer Science and Information Technologies	<i>Feb 2025 – Jul 2025</i> <i>Maribor, Slovenia</i>
Muammer Dereli Fen Lisesi - Mathematics and Natural Sciences Grade: 97.1/100, Ranked 1,224th in YKS-SAY	<i>Sep 2017 – Jun 2021</i> <i>Kocaeli, Türkiye</i>

Experience

Yapı Kredi Teknoloji Software Engineering Intern	<i>Feb 2026 – Present</i> <i>Kocaeli, Türkiye</i>
--	--

- Contribute to customer acquisition and marketing applications by completing backend and frontend development tasks using Spring Boot and React.
- Migrate legacy service integrations to new services, including SOAP-to-REST migrations and related application updates.
- Implement maintenance and enhancement tasks in existing React interfaces and write unit tests to validate application changes.
- Participate in two-week Agile sprints and use Git-based workflows involving feature branches, commits, pull requests, and code reviews.

ASELSAN Summer Intern	<i>Sep 2025</i> <i>Ankara, Türkiye</i>
---------------------------------	---

- Developed a live video streaming library in C++ using CMake and GStreamer, supporting H.264 encoding and decoding with transmission over UDP, TCP, and WebRTC.
- Implemented dynamic bitrate adjustment and an XML-based configuration system for modifying resolution, frame rate, encoder settings, and network parameters without recompiling the library.
- Tested and compared streaming protocols under simulated packet loss, latency, bandwidth limitation, and out-of-order delivery scenarios using Clumsy.

BRİSA Bridgestone Sabancı Summer Intern	<i>Aug 2025</i> <i>Kocaeli, Türkiye</i>
---	--

- Independently developed the request management and analytics modules of a responsive field-data web application using Django, HTML, CSS, JavaScript, and MySQL.
- Implemented daily, weekly, and mixture request workflows with capacity validation, role-based access, approval processing, and Excel import/export functionality.
- Built filterable bar and pie chart dashboards for analyzing approved requests and integrated the frontend, Django backend, and database to maintain consistent data flows.

Projects

Domain-Generalized Remote Sensing Scene Classification Deep Learning, Remote Sensing, Image Classification	<i>Oct 2025 – Jun 2026</i> Graduation Project
--	--

- Developed and evaluated deep learning models for remote sensing scene classification across different geographic regions.
- Built data preprocessing, model training, and performance evaluation workflows using satellite imagery.
- Analyzed model performance on unseen geographic regions to evaluate domain generalization.

LLM-Based Fault Localization for UI Test Traces

May 2026 – Jun 2026

Python, LangChain, Playwright

[GitHub](#)

- Developed an LLM-based prototype for identifying faulty steps in failed mobile and web UI test traces.
- Integrated OpenAI and Gemini APIs to analyze Playwright traces, screenshots, execution logs, and failure descriptions, ranking suspicious steps with evidence-based explanations.
- Evaluated fault-localization performance using Top-1 accuracy, Top-3 accuracy, and Mean Reciprocal Rank (MRR).

Rating Word Sense Plausibility in Ambiguous Narratives

Apr 2026 – May 2026

Python, PyTorch, Hugging Face Transformers

[GitHub](#)

- Developed an NLP system for predicting graded word-sense plausibility in ambiguous narratives.
- Fine-tuned DeBERTa-v3-base and compared regression and ranking-based training objectives.
- Evaluated model performance using Spearman correlation, mean squared error, ranking accuracy, and precision-recall analysis.

Howudoin+ – Cloud-Deployed Messaging Application

May 2026

Spring Boot, React Native, AWS Services

[GitHub](#)

- Developed a cloud-enhanced version of the Howudoin messaging application using Expo, React Native, TypeScript, and a Spring Boot REST API.
- Reworked the application to use Amazon DynamoDB for persistent data storage.
- Containerized and deployed the backend on AWS using ECS Fargate, ECR and Application Load Balancer with CloudWatch for monitoring.

GeoQuiz – Full-Stack Geography Quiz Platform

May 2025

MongoDB, Express.js, React, Node.js

[GitHub](#)

- Developed a full-stack geography quiz platform using the MERN stack.
- Implemented randomized quizzes, GitHub OAuth authentication, and persistent quiz-history tracking.
- Built a dynamic leaderboard to rank users based on their quiz performance.

Howudoin – Mobile Messaging Application

Nov 2024 – Dec 2024

Spring Boot, React Native, MongoDB

[GitHub](#)

- Developed a mobile messaging application with a React Native frontend and a Spring Boot backend.
- Implemented user authentication, friend and group management, and messaging functionality.
- Designed and integrated REST API endpoints connecting the mobile application to the backend.

SUtore – Full-Stack E-Commerce Application

Oct 2024 – Jan 2025

Django, React, SQLite

[GitHub](#)

- Developed a full-stack e-commerce application using Django for the backend and React for the frontend.
- Implemented core online-shopping workflows, including authentication, product browsing, cart management, and order processing.
- Built a responsive user interface and integrated frontend components with backend API endpoints.

Skills

Programming Languages: Python, C, C++, Java, JavaScript, TypeScript, SQL

Backend: Django, Spring Boot, Node.js, Express.js, REST APIs

Frontend: React, React Native, Expo, HTML, CSS

Databases: MongoDB, PostgreSQL, MySQL, SQLite, Amazon DynamoDB

AI/ML: PyTorch, Hugging Face Transformers, LangChain

Cloud/DevOps: AWS (ECS Fargate, ECR, ALB, CloudWatch), Docker, Git

Tools: Jira, Postman, Playwright, CMake, GStreamer

Languages: Turkish (Native), English (Professional Working Proficiency)
